

# Climate Action Project

Climate action plan

4,400,270 students from 156 countries participated in the Climate Action Project 2023 again this year.

The Climate Action Project is a free 6-week action plan that allows teachers and students to work together on environmental issues. <https://www.climateactionproject.org/>

During the project, classes explore the causes climate change, develop solutions and take

Our third year participated in the project from September 25th to November 2nd. We causes and effects of climate change, dealt problem locally and globally, discussed implemented some of them in our school.

The project also cultivated in children skills cooperation, creativity, empathy, critical the ability to solve problems.

and effects of action.

that lasted studied the with the solutions and

such as: thinking and

First, we studied the greenhouse effect with experiments. Each child then created their own poster depicting the phenomenon.

Then we analyzed the causes of the phenomenon by talking about atmospheric pollution from the accumulation of carbon dioxide. With our posters we did a small protest march in the school yard to inform the school community.

We dreamed of the school of the future, as we would like it to be in our school, that is, with almost zero footprint. We split into two groups. The first group made the two-dimensional (2D) floor plan of a school and the other group made the 3-dimensional (3D) floor plan. Then each group presented their construction to the other.

Finally, we moved on to the action. We wondered how the school of our dreams will become a reality?

We toured the school premises and identified the problems that appeared in over-consumption of resources. So, we madesigns for all the areas and placed them everywhere.

Another Global Climate Action Plan has ended and we are happy to join this huge educational group of small citizens who care and act for a better world.
